

RajMohan Bharathi

Director / Head of PlatformOps | Engineering Manager | Cloud & IT Infrastructure Leader | AWS Solutions Architect

SUMMARY

Experienced engineering leader with a background of over a decade in CloudOps, DevOps, and IT infrastructure across technology and enterprise services organizations in India. Progressive responsibilities held from Principal Infrastructure Engineer to Engineering Manager and Head of PlatformOps, overseeing cloud operations, command centers, platform engineering, and large-scale enterprise environments. Proven expertise in AWS, Azure DevOps, Terraform-based IaC, CI/CD, microservices migrations, Kubernetes, ECS Fargate, observability (Grafana, Zabbix, New Relic), and enterprise platforms such as Windows Server, VMware, and Nutanix, alongside strong focus on security, compliance (SOC 2, DPDPA, ISO 27001), and governance. Track record includes designing and implementing cloud-native architectures, establishing centralized command centers, driving MTTR reduction through automation and incident frameworks, leading MSP-to-in-house operations transitions, and building high-performing CloudOps, SRE, and DevOps teams through structured upskilling programs. Educational foundation consists of a Diploma in Computer Technology (Nanjappa Institute of Technology) following CBSE secondary education, complemented by ongoing hands-on learning in cloud and DevOps platforms and tools. Currently positioned for Director / Head of PlatformOps or Engineering Manager roles focused on cloud platforms, site reliability, and infrastructure modernization in complex, regulated, and high-availability environments.

WORK EXPERIENCE

- 2025-09 - present

Engineering Manager - Platform-ops

Binary Semantics Ltd

 - Ownership of end-to-end Platform Operations strategy for large-scale, regulated enterprise systems, including migration of legacy monolithic applications to microservices architectures to improve scalability, release velocity, and fault isolation.
 - Implementation of SOC 2 Type II controls across Cloud and Infrastructure environments, including IAM least-privilege, MFA, segregation of duties, centralized logging, audit trails, and change traceability via Terraform-based IaC, enhancing audit readiness and deployment consistency.
 - Design of DPDPA-aligned data protection architecture with encryption at rest and in transit (KMS, TLS), secure data access and retention mechanisms, and strengthened ISMS (ISO 27001) controls such as incident response playbooks, backup, DR, and business continuity testing in collaboration with Security, GRC, Legal, and Audit teams to close audit findings and maintain continuous compliance.
 - Standardization of Azure DevOps for sprint planning, backlog grooming, delivery tracking, and CI/CD pipelines for both infrastructure and application workloads, while reducing MTTR through automated remediation, runbooks, and self-healing workflows.
 - Leadership of transition from Managed Service Provider (MSP) to fully in-house Cloud and DevOps operations, including design of an upskilling roadmap for traditional infrastructure engineers, rollout of KodeKloud subscriptions and hands-on labs, and establishment of an ownership-focused culture to reduce vendor dependency and long-term operational costs.
 - Building and scaling of cross-functional teams spanning CloudOps, DevOps, SRE, Command Center, Security, and Databases, with mentoring of senior engineers into tech leads and managers and close collaboration with Product, Engineering, Finance, and Leadership to align platform decisions with business outcomes.
- 2024-03 - 2025-09

Engineering Manager

Entrata India, Pune, IN

 - Oversight of Cloud Operations (L1) and the Global IT Command Center at Entrata India in Pune, ensuring 24x7 availability, rapid incident resolution, and proactive observability-driven system monitoring.

Pune, Maharashtra, IN

PERSONAL DETAILS

DOB:

17-06-1982

PRESENT ADDR:

M1005, ROF ALYAAS -2, SECTOR - 102, GURUGRAM, HARYANA - 122006

MARITAL STATUS:

MARRIED

TECH SKILLS

AWS

AWS Cloud Infrastructure

Solutions Architect

M2M App Migration, Cloud Cost Optimization, Automation

Terraform / Terragrunt

Infrastructure as Code (IaC)

Agentic AI

Application Development using Agent AI (claude, Gemini)

MCP Server

Agentic SRE, Terraform

- Design and implementation of cloud-native solutions on AWS using Terraform and HCP, covering infrastructure architecture, provisioning, and continuous optimization.
- Administration and tuning of ECS Fargate clusters, microservices, and Kubernetes deployments for containerized applications, including capacity scaling, deployment strategies, and stability improvements.
- Development and enhancement of incident response frameworks with emphasis on MTTR reduction through well-defined RCA (Root Cause Analysis) processes and automation of recurring operational tasks.
- Creation and maintenance of Grafana dashboards, configuration of alerting, and use of Zabbix for on-prem monitoring; handling of queue consumers, RabbitMQ, and infrastructure-level root-cause analysis for application-specific incidents.
- Service as SPOC for senior management and directors, including definition of team scope, execution of performance evaluations, and management of contracts and vendor relationships.

2023-05 -
2024-03

Principal Infrastructure Engineer

Mphasis, Pune, IN

Directed TechOps initiatives, emphasizing cloud architecture design, infrastructure automation, real-time monitoring, and IT modernization strategies.

- Designed and maintained CI/CD workflows using GitHub Actions, seamlessly integrating SonarQube for continuous code analysis and enabling automated application deployments.

Served as the Subject Matter Expert (SME) for Windows Server, VMware, and Nutanix, overseeing the health and scalability of complex enterprise clusters to ensure consistent high availability.

- Orchestrated the end-to-end implementation of AWS Control Tower, including enforcement of IAM policies and establishment of cloud governance best practices.

- Played a key role in setting up a Centralized Command Center, deploying advanced monitoring systems such as Grafana, Zabbix, and New Relic for proactive infrastructure insights.

- Led efforts in vulnerability management, disaster recovery planning, and the automation of repetitive operational tasks through scripting with PowerShell, VBScript, and Terraform.

2022-07 -
2023-04

Engineering Manager

Entrata India, Pune, IN

2019-04 -
2022-07

Principle Infrastructure Engineer

Mphasis, Kharadi, IN

2016-08 -
2018-09

Co-Founder

Inobees Technologies, New Delhi, IN

- Co-led the founding and growth of a technology services organization focused on custom ERP solutions, cloud-based CMS platforms, and infrastructure modernization for clients in New Delhi, IN.
- Directed the design and end-to-end delivery of custom ERP systems and cloud-native CMS platforms, ensuring alignment with client business processes, scalability requirements, and integration needs.
- Advised CXO-level stakeholders on IT strategy, cloud adoption, cost optimization, and modernization roadmaps, contributing to improved technology alignment with business objectives and measurable reduction in IT spend.
- Architected secure, fault-tolerant hybrid cloud infrastructures to support high availability, performance, and regulatory compliance, incorporating best practices in security, backup, and disaster recovery.
- Provided comprehensive guidance across the solution lifecycle—from requirements gathering and technical design through implementation, deployment, and post-deployment optimization—covering cloud, automation, and security initiatives.
- Championed agile methodologies and cross-functional collaboration with developers, designers, and DevOps engineers to accelerate delivery cycles,

Devops

Azure Devops

IT Infrastructure Managed Services

VMware, Linux, Windows Server, Storage, DataCenter Operations

LEADERSHIP

Team Development and Mentorship

Skilled at coaching, guiding, and empowering team members to enhance performance, build confidence, and achieve individual and collective objectives.

Strategic Decision-Making

Ability to analyze complex situations, evaluate risks, and make data-driven decisions that align with organizational goals and drive long-term success.

Effective Communication

Strong ability to clearly convey expectations, provide constructive feedback, and foster open communication across teams and stakeholders.

Conflict Resolution

Proven capability to manage disagreements professionally, mediate disputes, and maintain a collaborative and productive work environment.

Accountability and Ownership

Demonstrates responsibility for outcomes, sets clear expectations, and ensures tasks and projects are completed efficiently and on time.

improve product quality, and bring scalable solutions to market.

2010-09 - 2018-08	Director & Co-Founder Sterk Informatique Solutions Pvt Ltd, Delhi, IN • Led a technology-driven IT consulting firm specializing in cloud infrastructure, virtualization, and enterprise IT automation, with full responsibility for strategic direction and execution. • Built and managed strategic alliances with VMware and Microsoft to deliver end-to-end IT infrastructure solutions for SME and enterprise clients. • Designed and implemented scalable virtualization and cloud architectures, driving turnkey project deliveries and winning deals worth crores through effective RFP/RFI responses and presales engagement. • Oversaw full P&L ownership, including revenue forecasting, budgeting, cost control, and operational optimization to ensure sustainable growth and profitability. • Mentored and guided cross-functional teams across engineering and customer success, establishing a high-performance culture and improving delivery quality and client satisfaction. • Conceived, developed, and launched SaaS-based solutions focused on IT monitoring, automation, and infrastructure optimization, while establishing an innovation hub for R&D in VDI, network security, and edge computing.
2006-09 - 2010-02	ASE Tata Consultancy Services, GuruGRAM, BANGALORE, United KINGDOM • Supported mission-critical IT infrastructure and enterprise system operations for global clients in banking, retail, and manufacturing sectors across India and the United Kingdom, including onsite engagements in Manchester, London, Leeds, Limerick, Glasgow, and Birmingham. • Performed Windows Server administration, Active Directory management, and Exchange Server operations for distributed environments, providing L2/L3 support to thousands of users to ensure business continuity and timely incident resolution. • Executed Physical to Virtual (P2V) migrations using VMware ESX and vMotion to enable server consolidation, optimize resource utilization, and support large-scale infrastructure transformation initiatives. • Led enterprise patch management activities, including vulnerability remediation, performance tuning, and compliance-driven updates under strict SLAs, aligned with ITIL-based incident, problem, and change management processes. • Coordinated end-to-end execution of complex technical changes in collaboration with global cross-functional teams (project managers, network specialists, application owners), consistently achieving zero-downtime implementation for critical IT systems. • Produced and maintained technical documentation and standard operating procedures (SOPs), contributing to remote infrastructure management (RIM), onsite-offshore coordination, IT service continuity, and cross-cultural collaboration across geographically dispersed teams.
2005-08 - 2006-08	ICT Manager Indus International School Bangalore (IISB), Bangalore Rural
2005-02 - 2005-08	Systems Administrator R2k Inc, Bangalore,
2003-01 - 2005-01	Sr. Engineer - Technical Support INFOCARES, TIRUPUR
2000-05 - 2002-11	Sr. Engineer - Technical Support Lashtech computer services, Coimbatore, IN

EDUCATION

1987-88 - 1997-98	Central Board of Secondary Education - Xth STD Kendiya Vidyala Ordinance Factory Chandrapur - MH Grade - 49%
----------------------	---

PROJECTS - MIGRATION OF MONOLITHIC APP TO MICROSERVICE - AWS ECS CLUSTER

Cloud Architecture & Platform Design

1. Designed and implemented a secure, highly available AWS multi-VPC architecture using Ingress, Private, Inspection, and Egress zones, aligned with enterprise security best practices.
2. Built an internet-facing ingress layer using AWS WAF + Public Application Load Balancer (ALB) to protect applications against OWASP threats and control inbound traffic. \
3. Implemented private application access via internal ALB and Network Load Balancer (NLB) to route traffic securely to backend services without public exposure.
4. Deployed application workloads on Amazon ECS (Elastic Container Service) within a private VPC, ensuring no direct internet access to containers.
5. Integrated AWS Transit Gateway to centrally manage east-west and north-south traffic between VPCs, enabling scalable and controlled network routing.
6. Implemented an Inspection VPC with AWS Network Firewall, enforcing deep packet inspection and egress filtering for all outbound traffic.
7. Designed a dedicated Egress VPC with NAT Gateways to control and monitor outbound internet access to external third-party APIs.
8. Used VPC Interface Endpoints (AWS PrivateLink) for secure access to AWS services without traversing the public internet.
9. Secured backend data access using Amazon RDS deployed in private subnets with restricted security group access. 1
0. Applied least-privilege security group rules and network segmentation to isolate application, database, and shared services.

Monolithic Application Modernization & Container Migration

1. Led the migration of a monolithic .NET Framework 4.7 application to a containerized microservices-oriented architecture.
2. Refactored the legacy application into multiple domain-aligned services.
3. Containerized applications using Docker, standardizing build and deployment processes.
4. Deployed containerized services to Amazon ECS Cluster, improving scalability, fault tolerance, and deployment consistency..

PROJECTS - MIGRATION OF MONOLITHIC APP TO MICROSERVICE - AWS EKS CLUSTER

Platform Modernization – Monolith to Microservices on Amazon EKS (Multi-Region, DR-Enabled)

1. Led migration of a legacy monolithic client platform to microservices on Amazon EKS, enabling scalable, cloud-native architecture.
2. Designed multi-region architecture (Mumbai Active / Hyderabad Warm-Standby) ensuring high availability and optimized DR cost.
3. Implemented ALB-based ingress, Kubernetes orchestration, and GitOps (ArgoCD) for controlled, versioned deployments.
4. Decomposed monolith into domain-driven microservices with independent scaling and releases.
5. Integrated Istio Service Mesh with mTLS, enabling secure service-to-service communication and zero-trust networking.
6. Architected resilient data layer using RDS SQL Server (Multi-AZ + cross-region replication), Redis caching, and S3 replication.
6. Reduced deployment cycles from weeks to hours through CI/CD automation and containerization.
7. Achieved 99.9%+ availability, improved peak-load scalability, and reduced failure blast radius.
8. Aligned infrastructure with SOC 2, ISMS, and DPDPA controls, ensuring audit readiness and secure data handling.
9. Enabled faster insurer onboarding and improved business agility through modern platform engineering practices.

Business Outcome

1. 99.9%+ availability
2. mproved scalability during peak insurance loads
3. Reduced deployment cycles from weeks to hours
4. Lower blast radius through service isolation
5. Compliance-aligned infrastructure (SOC 2, ISMS, DPDPA ready)
